

NEWS RELEASE

VITROCELL Systems GmbH

VITROCELL® has a strong focus on design and manufacturing of new cultivation and exposure systems for in vitro applications. The product line consists of complete systems for the exposure of cells and bacteria to gases, complex mixtures, environmental pollutants and nano particles.

The VITROCELL® activities were so far managed as a division of Pieter van Weenen & Co. GmbH, located in Waldkirch / Germany. The growth of the activities created the need to take the next step: the foundation of VITROCELL Systems GmbH as a wholly owned subsidiary of Pieter van Weenen & Co. GmbH.

VITROCELL Systems GmbH will further exploit the potential of the market as an innovative and future-oriented company. The priorities of the company are development, production and service to realize customer-oriented solutions. Managing Director of the company is Tobias Krebs.

Latest new developments are the VITROCELL® 12 stainless steel and titanium cultivation module series as well as the VITROCELL® 24 system for high throughput analysis. The VITROCELL® 24 system allows to perform 6 dilutions each with exposure to 4 wells in one experiment. This is a big step ahead for higher efficiency of in vitro research.

Further information on can be obtained on www.vitrocell.com.
